 November 2000, entire text; all drawings

Documents 1 to 5 do not set forth a navigation system, wherein a use setting means is provided which sets whether or not to use the automatic toll payment system on toll roads on the route set by the route setting means, and signals changing the state of use of automatic toll payment systems of an on-board device are transmitted to the on-board device based on the settings of said use setting means.

Moreover, said feature is novel and it would not be easy for a person skilled in the art to conceive of said feature.

WHAT IS CLAIMED IS:

A navigation apparatus, comprising:
 position detecting means for detecting a current position of an automotive vehicle;
 destination setting means for setting a destination of said automotive vehicle;

travel route setting means for setting a travel route to said destination set by said destination setting means on the basis of said current position detected by said position detecting means;

operation mode setting means for setting whether or not to utilize an electronic toll collection system on a toll road of said travel route set by said travel route setting means; and

communication means for performing communication with an in-vehicle apparatus provided in said automotive vehicle as part of said electronic toll collection system, said communication means being operative to transmit a signal to said in-vehicle apparatus to change an operation mode of said in-vehicle apparatus to said electronic toll collection system.

- 9. A navigation apparatus, comprising:

position detecting means for detecting a current position of an automotive vehicle; operation mode setting means for setting whether or not an electronic toll collection system is utilized on a toll road of said travel route set by said travel route setting means; and

communication means for performing communication with an in-vehicle apparatus provided in said automotive vehicle as part of said electronic toll collection system, said communication means being operative to transmit a signal to said in-vehicle apparatus to change an operation mode of said in-vehicle apparatus to said electronic toll collection system.

- An in-vehicle apparatus, comprising:
 communication means for performing communication with a navigation apparatus;
 operation mode switching means for switching an operation mode in which an
 electronic toll collection system is utilized on the basis of a signal received from said
 navigation apparatus by said communication means.
 - 12. A navigation system, comprising:
 - a navigation apparatus as set forth in claim 1; and

an in-vehicle apparatus provided in said automotive vehicle as part of said electronic toll collection system, and adapted to perform communication with said communication means of said navigation apparatus.
